

Customer Journey Map

Date	15 March 2026
Team ID	SWTID-2026-7960
Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Data Preparation & Staging	Stage 2 Field Mapping & Configuration	Stage 3 Import Execution & Verification
Actions <i>What does the customer do?</i>	☐ Gathers and cleans employee raw data in Excel spreadsheets (.csv/.xlsx). ☐ Navigates to the ServiceNow instance and loads data via Load Data module. ☐ Creates and defines the staging table (u_employee_import).	☐ Sets up Transform Maps to link staging fields to target employee tables. ☐ Configures Mapping Assist for precise column-to-field matching. ☐ Applies the Coalesce checkbox on unique identifiers (e.g., Employee ID).	☐ Triggers the Transform operation to push records into the target table. ☐ Inspects Transform History logs to check status (Inserted, Updated, Skipped). ☐ Verifies final employee records and generates data summary reports.
Touchpoint <i>What part of the service do they interact with?</i>	☐ Excel Spreadsheet Interface ☐ ServiceNow 'Load Data' Module ☐ Staging Table List View	☐ Transform Map Form View ☐ Mapping Assist Utility Interface ☐ Field Map Related Lists	☐ Transform History Module / Logs ☐ System Log / Error Messages ☐ Target Table (Employee Records View)
Customer Thought <i>What is the customer thinking?</i>	☐ "I hope my spreadsheet columns are formatted correctly to avoid load failures." ☐ "Is the staging table capturing all rows from the raw file accurately?"	☐ "Will the Coalesce option correctly prevent duplicate employee accounts?" ☐ "Are all source fields mapped properly to their matching target fields?"	☐ "Did the transformation finish without any script errors or skipped rows?" ☐ "Let me double-check the logs to ensure no duplicate IDs were generated."

Customer Feeling <i>What is the customer feeling?</i>	Anxious about formatting errors and data layout mismatches in raw files.	Focused and cautious while setting up field mappings and unique keys.	Relieved and satisfied upon seeing clean records successfully imported and logged.
Process Ownership <i>Who is in the lead on this?</i>	Data Administrator / HR Team Lead (Parvathi P)	ServiceNow Developer / System Integrator (Yuvasri T / Manjula K)	Database Manager / Quality Analyst (Kalaiyarasi K / Jayalakshmi S)
Opportunities <i>How can we improve this stage?</i>	Implement automated CSV/Excel validation templates to reduce manual pre-cleaning time.	Utilize auto-mapping features where possible to accelerate configuration and minimize human error.	Set up automated email notifications and detailed error-tracking dashboards for failed transforms.
