

Solution Requirements

Date	30 September 2026
Team ID	SWTID-2026-7960
Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users must securely log into the ServiceNow Personal Developer Instance (PDI) using enterprise credentials or multi-factor authentication (MFA) via the platform login gateway.	High
2	Authorization levels	Define distinct user roles such as admin, itil, or custom HR import roles where only authorized administrators can load spreadsheets, configure transform maps, and execute imports.	High
3	External interfaces	The system must connect to external data sources by supporting CSV and Excel (.xlsx) spreadsheet uploads as source inputs for data integration.	High
4	Transactions processing	Handle bulk data ingestion by staging records in	High

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
		u_employee_import, matching unique keys via the Coalesce feature, and processing transformations to insert or update target table records.	
5	Reporting	Generate Transform History logs, execution tracking records, and system dashboards showing import states (Inserted, Updated, Skipped, Error).	Medium
6	Business rules, etc.	Enforce data validation constraints and mapping rules so that incoming spreadsheet columns precisely align with target employee fields without data corruption.	High
7	Compliance to laws or regulations	Adhere to corporate data privacy policies and secure handling standards for internal employee personally identifiable information (PII).	Medium
8	Other	Provide automated error-handling notifications and logs when transform scripts encounter missing mandatory fields or formatting mismatches.	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Process and transform uploaded spreadsheet batches efficiently within standard platform execution limits.	Bulk imports of up to 1,000 records process and complete within under 10 seconds.
2	Scalability	The architecture must seamlessly handle growth in dataset sizes and periodic organizational roster updates.	Supports staging and transforming datasets up to 10,000 rows per batch without performance degradation.
3	Security & Data Privacy	Ensure secure transmission and storage of sensitive employee	Role-based access control (RBAC) enforced with

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
		records within the instance database.	encrypted session handling and secure HTTPS data transit.
4	Reliability & Availability	Ensure stable execution of import sets and dependable access to transformation logs and staging history.	99.9% availability per month on the ServiceNow cloud hosting infrastructure.
5	Usability & Accessibility	Provide an intuitive and user-friendly Service Portal / UI navigator interface for configuring load modules and mapping assist features.	Complies with standard web accessibility guidelines and intuitive form navigation.
6	Other	Maintainability and code modularity for transform scripts, field maps, and scheduled data imports.	Clean script inclusion and documented transform map layouts for future administrative updates.
