

## Project Executable Files

|                      |                                                              |
|----------------------|--------------------------------------------------------------|
| <b>Date</b>          | 30 September 2026                                            |
| <b>Team ID</b>       | SWTID-2026-7960                                              |
| <b>Project Name</b>  | Import Data using Transform Maps (Spreadsheet) in ServiceNow |
| <b>Maximum Marks</b> | 3 Marks                                                      |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                    | Submitted (Yes / No / NA)          |
|------|-------------------------------------------------------------------|------------------------------------|
| 1    | Complete source code (all files and folders / Update Set XMLs)    | Yes                                |
| 2    | README / Setup Guide (instructions to run the project)            | Yes                                |
| 3    | requirements.txt / package.json / dependency file                 | NA (Platform-native configuration) |
| 4    | Database schema / seed files (Table schemas & Sample Spreadsheet) | Yes                                |
| 5    | Environment configuration file (.env.example or similar)          | NA                                 |
| 6    | Deployed application URL (if hosted)                              | Yes                                |
| 7    | APK / Executable binary                                           | NA                                 |
| 8    | Docker / Containerization config                                  | NA                                 |
| 9    | Test files and test results (Transform History logs)              | Yes                                |
| 10   | Demo video or walkthrough                                         | Yes                                |

## step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

ServiceNow_Transform_Maps_Project/
├── update_sets/
│   └── sys_update_set_import_transform_maps.xml # Exported application
schema, tables & transform map
├── data/
│   └── Sample Spreadsheet.xlsx # Source employee dataset for
import testing
├── docs/
│   └── README.md # Setup and execution guide
└── reports/
    └── employee_analytics_dashboard_config.xml # Analytics workspace
dashboard and report definitions
  
```

## Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                                                                                                                                                                                                  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | ServiceNow Personal Developer Instance (PDI) URL [ <a href="https://dev267931.service-now.com/login.do?user_name=admin&amp;sys_action=sysverb_login&amp;user_password=LSz%400dgI9m%5EX">https://dev267931.service-now.com/login.do?user_name=admin&amp;sys_action=sysverb_login&amp;user_password=LSz%400dgI9m%5EX</a> ] |
| <b>Login Credential6 (Demo)</b>    | Username: admin / Password: LSz@0dgI9m^X                                                                                                                                                                                                                                                                                 |
| <b>Platform / Hosting Provider</b> | ServiceNow Cloud Platform (Personal Developer Instance / Enterprise Cloud)                                                                                                                                                                                                                                               |
| <b>Repository Link</b>             | <a href="https://github.com/parvathi077/vetri-thiran-payirchi-thittam">https://github.com/parvathi077/vetri-thiran-payirchi-thittam</a>                                                                                                                                                                                  |
| <b>Demo Video Link</b>             | <a href="https://drive.google.com/file/d/14meKMEdORtWL_LUhp5FnsE3Z1OZjcqYV/view?usp=sharing">https://drive.google.com/file/d/14meKMEdORtWL_LUhp5FnsE3Z1OZjcqYV/view?usp=sharing</a>                                                                                                                                      |

#### Step 4: Run Instructions

1. **Access the Instance:** Open the provided ServiceNow PDI URL in any modern web browser and log in using the administrator credentials.
2. **Verify Tables:** Navigate to the Application Navigator, search for u\_employee\_test (Target Table) and u\_employee\_import (Staging Table) to verify the schema setup.
3. **Load Spreadsheet Data:**
  - Search for **Load Data** in the Application Navigator.
  - Upload the provided Sample Spreadsheet.xlsx file.
  - Target the staging table (u\_employee\_import) and submit.
4. **Configure Transform Map:**
  - Click on **Create Transform Map**.
  - Verify field mappings and ensure **Coalesce** is set to true on the u\_employee\_id field to prevent duplicate records.
5. **Execute Transformation:** Click on **Transform** to move records from staging to the target production table (u\_employee\_test).
6. **View Analytics Dashboard:** Navigate to **Dashboards** under Self-Service, open the **Employee Analytics Dashboard**, and review the real-time visual reports (Employee List, Donut Chart by Department, Bar Chart by Location).

#### Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                                                                                               | Workaround / Status                                                                                |
|------|----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 1    | Free ServiceNow PDIs undergo automatic hibernation after periods of inactivity.                                                        | <b>Workaround:</b> Wake up the instance via the ServiceNow Developer Portal before evaluation.     |
| 2    | Spreadsheet column headers must precisely match defined source field names (u_employee_id, u_name, u_email, u_department, u_location). | <b>Workaround:</b> Use the official Sample Spreadsheet.xlsx provided in the submission repository. |
| 3    | Single-batch import execution limits on free-tier developer instances.                                                                 | <b>Workaround:</b> Maintain import batches under 1,000 rows per transaction.                       |
