

Technology Stack

Date	30 September 2026
Team ID	SWTID-2026-7960
Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details (Table):

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Service Portal / UI Navigator (HTML/CSS, Jelly, AngularJS)	Provides a responsive, built-in user interface to easily navigate load modules, staging tables, and mapping assistants without external setup.
2	Backend / Server-Side	ServiceNow JavaScript Engine & Rhino (Server-Side Scripts, Script Includes)	Enables fast server-side transaction processing, data transformation scripts, and business logic execution natively within the platform.
3	Database / Data Storage	ServiceNow Relational Database (MySQL-backed Staging and Target Tables like	Strong relational mapping to handle staging raw spreadsheet data and securely persist clean

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
		u_employee_import)	employee records into target tables.
4	Cloud / Hosting / Deployment	ServiceNow Cloud Platform (PDI - Personal Developer Instance / Enterprise Cloud)	Ensures robust cloud hosting, automated backups, and seamless scalability for enterprise data integration workloads.
5	Version Control & CI/CD	GitHub & ServiceNow Studio Source Control Integration	Enables seamless team collaboration, script version tracking, and direct code synchronization across developer instances.
6	Third-Party APIs / Other Tools	CSV / Excel Parser & ServiceNow Import Sets API	Facilitates external spreadsheet (.csv/.xlsx) data parsing and automated bulk record ingestion into the platform.
