

Code-Layout, Readability and Reusability

Date	30 September 2026
Team ID	SWTID-2026-7960
Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	Standard 4-space indentation across Transform Scripts and event hooks.
2	Proper File Structure	Files and folders are logically organized	Yes	Staging table (u_import_data_staging), Data Sources, and Transform Maps are clearly organized.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Clear naming conventions (sourceEmail, targetUserSysId, isRecordValid).
4	Function / Method Names	Functions are descriptively named	Yes	Descriptive verb-noun naming in scripts
5	Code Comments	Inline and block comments explain logic	Yes	Comprehensive headers and inline mapping explanations.
6	Modular Design	Code is split into reusable functions/modules	Yes	Validation and field normalization logic extracted to Script Includes.
7	No Redundant Code	Duplicate or unused code is removed	Yes	Unused field mappings and duplicate transform scripts removed.
8	Error Handling	Exceptions and errors are handled gracefully	Yes	Handled using error = true; and log.error() in onBefore scripts to skip invalid rows without breaking the import batch.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	where Reused	Reusability Level (High / Medium / Low)
1	Data Validation Utility Script Include	JavaScript / ServiceNow Server API	OnBefore Transform Scripts lo email validation, duplicate checks mariyu mandatory column checking kosam use cheyabadindhi	High
2	Standard Transform Map Template	ServiceNow Import Sets	Excel/CSV spreadsheets nundi User details, Assets mariyu CIs import chese multiple transform maps lo base structure ga reuse cheshamu.	High
3	Coalesce & Field Mapping Rule Set	ServiceNow Transform Maps	Direct target field updates mariyu duplicate records create avvakundha prevent cheyadaniki redundant import pipelines lo use cheshamu	High
4	Custom Error Logging Helper	JavaScript / ServiceNow GlideSystem (gs)	Import Set row transformation appudu batch errors, failed record system logs mariyu error report generation lo reuse cheshamu.	Medium
5	Date Format Normalizer Script	JavaScript / GlideDateTime API	Excel sheets lo unde vividha rakala Date formats (DD/MM/YYYY, MM-DD-YYYY) ni standard ServiceNow UTC format ki convert cheyadaniki map scripts lo reuse cheshamu	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Import Set table (u_import_data_staging), Data Source, and Transform Map scripts follow standard ServiceNow best practices with clear modular structure.
Readability	5	Field transformation logic and event scripts (onBefore, onAfter) use meaningful variable names and consistent 4-space indentation, making them easy to review
Reusability	5	Data validation logic, date formatting, and coalesce mapping rules are extracted into Script Includes and reusable templates for future spreadsheet imports.
Documentation / Comments	4.5	Inline comments clearly explain script steps, mapping rules, and field transformations, with clear header documentation for every script block
Overall Score	4.9 / 5.0	High-quality implementation meeting all ServiceNow import set standards with robust error handling and clean layout
