

Coding & Solution

Date	30 September 2026
Team ID	SWTID-2026-7960
Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[https://github.com/parvathi077/vetri-thiran-payirchi-thittam]
Programming Language(s)	[JavaScript (ServiceNow Server-Side Scripting - Glide API)]
Framework(s) Used	[ServiceNow Platform Architecture, Import Sets Engine, Transform Maps & GlideSystem APIs]
Key Features Implemented	• Excel/CSV Spreadsheet Staging Table Setup (u_import_data_staging) • Automated Field Map & Coalesce configuration (Email/User ID) to prevent duplicate records • onBefore Transform Scripts for data validation & cleaning • Custom Date Normalization script using GlideDateTime • Error logging mechanism using log.error() and gs.log()
Pending / Incomplete Features	None. All core import requirements, mapping rules, and validation scripts have been fully implemented and verified.

Setup / Run Instructions	1. Log in to ServiceNow Developer Instance. 2. Navigate to System Import Sets > Load Data and upload the target Spreadsheet. 3. Open System Import Sets > Transform Maps and select Spreadsheet_To_Target_Table_Map. 4. Click Run Transform to map staged data into target records. 5. Check Import Set Logs to verify record execution status.
---------------------------------	---

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The implementation successfully automates the ingestion of spreadsheet data into ServiceNow target tables using optimized Transform Maps. Coalesce field logic ensures zero record duplication, while server-side onBefore scripts gracefully catch invalid rows (such as missing mandatory fields or invalid email formats) without stopping the overall batch transform execution.
